Action on Hearing Loss B9250 mobile phone sensor product

Configuration switches shown with cover removed. Do not alter these without referring to page 2

2. Install a 9 volt PP3 alkaline or lithium battery making sure to observe the correct polarity.

When a battery is first fitted the indicator light will flash red then green a few times then light solid green & pause briefly.

The light will then will flash green several times to show the battery voltage.
9 flashes = 9Volts in the battery.

If the light flashes red at this point the battery is flat and will need to be replaced.

To repeat the battery check remove the battery, press the test button then re-insert the battery to start the sequence again.

3. The monitor is activated using an external device that delivers a short circuit to a 3.5mm jack.

Plug the 3.5mm jack into the socket.

The monitor may transmit the first time the connection is made. This is normal.

4. Place the sensor onto your device's screen.

WARNING

When installing the sensor make sure the cable doesn't cause a trip hazard.

5. When you receive a call the display will illuminate and trigger the Mini Monitor

WARNING! Your device and its accessories are not toys. They may contain small parts. Keep them out of the reach of small children.

It is possible for the monitor to light up different keys on the Pager or SignWave. This allows more than one mini monitor to be used on a SA3000 system.

Move the relevant key to the right .

Press the test button and check the correct event is received by the Pager or SignWave.

Key 7 must be left on.

Changing the system channel code

NOTE. In most cases it is not necessary to change the system code. However, when one or more systems are in close proximity, system codes can be used to avoid interference from other SA3000 systems using up to a maximum of 16 channels.

The monitor is supplied with no system code switches set (system code 1). For reference this is the factory setting should you need to re-set the unit.

System codes can be set using key switches 1 - 4.

The diagram to the right shows the 16 possible combinations.

KEY 7 MUST BE LEFT ON

Be sure that the same system code is set on the receiver to be used and any other monitoring options in that system.

Do not disassemble.

Do not disassemble

Silent Alert SA3000 system
 Operating Frequency: **869MHz**
 Output power: **<10mW**
 Hereby, Clofield Ltd declares this radio equipment is in compliance with Directive 2014/53/EU.
