Fire Safe interface panel

The Fire Safe Interface provides early warning of fire to Deaf and Hard of hearing people, who live, work or socialise in buildings where a commercial type BS: 5839-1 fire warning system is installed.

The Fire Safe panel is designed to comply with all relevant parts of BS: 5839-1 2013, and links to the buildings existing fire alarm main panel via a volt free relay. The integral radio transmitter gives a range of up to 1000 metres in open air, with good coverage in all types of building construction.
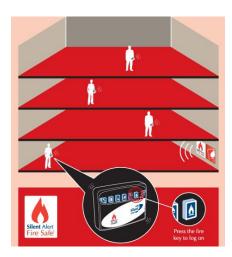

By simply linking the Fire Safe interface panel into the existing fire warning system, Deaf and Hard of Hearing people are alerted on their personal Pager or SignWave portable receiver of activation of the building's main fire alarm.

With the benefit of multi-alerting, Fire Safe users will still be able to receive information from other Monitors in the Silent Alert range, such as doorbell, telephone, baby alarm and door entry systems where companies are aiming to meet their responsibilities under the DDA and current Fire Safety legislation.

Fire Safe offers Building Managers and Alarm installers a simple, inexpensive and effective system that is easy to install and inexpensive to maintain. The equipment can be fitted and maintained by the customer's own fire alarm maintenance company, and is free from high cost long term maintenance contracts.

- Compliant with BS: 5839-1 ·
- Mains powered with battery back-up to BS: 5839-1 ·
- Suitable for all types of fire warning systems ·
- Low cost installation and maintenance ·
- Radio Licence Exempt ·
- Signal override broadcast to alert multiple receivers ·
- Positive confirmation of log-on when entering building ·
- Log-off reminder when leaving building area ·
- Fully compatible with Silent Alert home paging systems ·
- 1 year warranty ·
- Free Technical Helpline ·
- Operating range in open air approximately 1000m
